

**MINISTRY OF FOREIGN AFFAIRS
OF DENMARK**

Capacity workshop on:

**BASELINES, LIMITS AND BOUNDARIES IN A CHANGING OCEAN
DELIVERING CERTAINTY AND STABILITY**

NASSAU, THE BAHAMAS

May 6th – May 9th, 2024

The Commonwealth of the Bahamas together with the Kingdom of Denmark and the Australian National Centre for Ocean Resources and Security (ANCORS) are delighted to co-convene an in-person workshop for 20-30 governmental representatives involved in legal and technical aspects arising from climate changes in Nassau, The Bahamas from May 6th – May 9th 2024 on the Bahamas.

Sea level rise coupled with an increase in frequency and intensity of extreme weather events are likely to result in inundation, erosion of coastlines, etc. While these changes are a concern to all coastal States, they present an acute threat to Small Island Developing States (SIDS), and to those with low-elevation and soft and or sandy coasts in particular.

In the face of the accelerating threats of sea level rise, there is an increasingly pressing need to identify and declare the location of coastal/archipelagic baselines, delineate the outer limits of maritime zones and delimit maritime boundaries.

The objectives of the workshop are to explore and share knowledge on the threat posed by sea level rise and to provide practical advice and training concerning on how to:

- a) identify the locations of baselines along the coast using the latest space technology;
- b) delineate the outer limits of unsettled maritime claims;
- c) delimit maritime boundaries securing existing maritime entitlements;
- d) consider response options and potential mitigation measures in view of anticipated impacts on coastal communities.

Flights, accommodation and subsistence costs may be covered upon application.
